

Meeting Notes week 4

Stand up meeting

Nick

- Did not do much, did agenda thing and looked at older files and thought about the server
- Something
- Focusing on other courses

Nathan

- Wrote a class that can communicate with a database server and wrote some test for it and committed it this morning to the branch. Does not hash the passwords yet.
- Want to connect this with what we have with the Log-in screen
- Do not know how the GUI works

Johannes

- Looked again at the spring tutorial to get a better knowledge about the spring.
- Keep working on it.
- Still do not understand the HTTP connection how it should work

Jari

- Watched some video's about the action listeners and I think I have pretty good understanding how the buttons in the GUI work
- Look at the server so we can do HTTPS
- Not really, Telnet is not sufficient enough for HTTP

Lukas

- I looked for features how much it saves CO_2 and made some txt files out of it.
- Yet to be determent
- Vegetarian meal vs normal meal not a lot information about it

Ardy

- Made the GUI_App that opens after putting in sufficient username and password. It has a menu-bar with "My Profile", "Friends" and "Log out". Where I also implemented the action listener for the Log-out and made it work. After that I went back to the GUI_Login. Created a separate class that valid the login and tested it.
- Work with Nick on the complete GUI so we can connect it.
- The menu-was horrible. It kept not working like I wanted it. After some time the API of the action listeners gave a function that really helped and now it works

Meeting

- Update the ta with our Stand up meeting
- Bonus Feature: Store history of the earned points

TA points

- How is committing going
 - o As much as possible
 - o Small commits
 - o Big chunks committed and pushed equals bad practice
- Adjustments
 - o For example not pushing to the master because it gave problems

- Backlog
