

Agenda week 4

Things to talk about

1. Structure of the server: Which libraries we will use; how we will make the server online; how to communicate between server and client; etc.
2. Login GUI: This screen is (almost) done. It only needs some final aesthetic features. We should discuss if all practical functions are indeed present.
3. GUI second screen: Discussing the current state and what features it should contain eventually.
4. Combining a database with our project: Discuss the 'hows' and 'whats' of the implementation.
5. Testing!
6. Thinking about how to implement (one of) the 8 features we finally need to have in the project.
7. Other issues still open on GitLab.

To-do's and until next meeting

1. Getting the server to work correctly. This should be our top priority.
2. Adding functions to the second screen of the GUI.
3. Making the first screen *beautiful*.
4. Finding statistics concerning CO2 submission.
5. Starting the implementation of (one of) the features.
6. TEST. We should seriously take testing a bit more seriously.

Deliverables / goals

1. Getting the server to work fine
2. Having a concrete plan for the rest of the GUI.
3. Finding a way to combine a database.
4. Increasing our test branch coverage.

Responsibilities

Everybody will be responsible for one or multiple subjects. This will be further discussed at the meeting.
