Area 22
Monday Meeting 08/04

ATTENDEES

Nathan (had to leave early), Lukas, Nick, Jari, Ardy, Johannes.

STAND UP MEETING

- Jari showed his Powerpoint presentation. It looks good for now, but it still contains screenshots of the older version of the GUI.

- We talked about what still needs to be done.

- We uploaded the draft of the final report. We might still need to change some things after getting feedback. [After receiving feedback, we were able to make the needed changes to the final report and reupload it again].

NOTES FROM MEETING

- Testing is of high priority. However, we get conflicting testing coverage rates. We should ask Khaled about what is exactly expected of the testing.

- Checkstyle is still an issue. As long as we're still working on the code, checkstyle errors will accumulate.

NOTES FROM KHALED

- Jacaco is preferred as a testing statistic. As the Eclipse coverage plugin is based on Jacoco, we may use that as well.

- The code has to be in the master branch before our presentation. So, it is best to have all code available on Sunday the 14th 23:59.

- We have to make sure that we fully describe how to run our application and the database. Especially if we can't get the server/database to work remotely.

- Tips for the presentation: Open stance; look at general presentation tip. We are free to choose how to do the presentation (so using screenshots is okay).

- Feedback for the report: The report looks very good. Points for improvement are very short and will be sent via Mattermost.

- Our group feedback is online.

NOTES LAST WEEK GOALS

- We made some progress with testing, but we still have a lot to do.

- Checkstyle errors keep piling up.

ACTION ITEMS

1. After the GUI is fully done, we should add new screenshots.
2. Maybe we should write the text for the presentation beforehand instead of trying to improvise.
3. We need to finalize the code.
4. We absolutely should make sure we satisfy the minimum amount of testing.

FINAL NOTES KHALED

- Notes and final notes coincide.
